

PROJECT TITLE : AI FAQ ASSISTANT

PROJECT DEMONSTRATION PHASE

DEMONSTRATION PREPARATION:

The demonstration phase focused on presenting the working features and overall functionality of the AI FAQ Assistant. The backend application was executed using Node.js, and the REST API endpoints were demonstrated using Postman or Thunder Client to show how users interact with the system.

USER REGISTRATION AND LOGIN:

The demonstration started with user registration by providing valid user details through the registration API. The login process was then demonstrated using the registered credentials, after which a JWT token was generated for accessing protected features.

FAQ MANAGEMENT:

The FAQ management functionality was demonstrated by creating FAQ records using the authenticated API. The demonstration showed how questions, answers, and categories can be added and managed through the system using the appropriate API requests.

FAQ SEARCH:

The search functionality was demonstrated using the FAQ search API. A keyword was provided as a query to retrieve relevant FAQ records, showing how users can quickly find REQUIRED INFORMATION FROM THE STORED FAQS.

AI FAQ GENERATION:

The AI-powered functionality was demonstrated using the AI FAQ generation API. An authenticated request containing a topic was submitted to generate FAQ content using the Google Gemini integration. This demonstrated the system's ability to support automated FAQ content creation.

SECURITY DEMONSTRATION:

The authentication and security features were also demonstrated by showing that protected APIs require a valid JWT token. Password protection, validation, and centralized error handling help maintain secure and reliable system operations.

DEMONSTRATION OUTCOME:

The demonstration successfully presented the major functionalities of the AI FAQ Assistant, including authentication, FAQ management, search, and AI-based FAQ generation. It provided a clear view of the working system and showed how the different components operate together as a complete application.
